**MANHOLE ADAPTER SEALS  
 (WATERSTOPS)**

These help eliminate leaks around pipes entering manhole walls. They are made of 65 durometer EPDM rubber. They are corrosion-proof and are resistant to certain concentrations of acids and alkali. They are particularly useful for pipe to which concrete will not adhere, such as plastic pipe (including HDPE, C900, and SDR 35 pipe).

However, there are various conditions beyond the manufacturer's control, and their effectiveness as a seal is directly related to the quality of the grout, workmanship, and field conditions under which they are installed.

**DUROMETER = 65**  
**MATERIAL = EPDM**  
**MEETS ASTM C-923**

**1 5/8" BAND**  
**5/8" HIGH RIB**

**TENSILE  
 STRENGTH = 1025 PSI**  
**ELONGATION = 300%**
